# Victoria Square Development

Woking

## Development

This development is an extension to the existing shopping centre, along with the building of a 190 bed (20+ storey) and 2x 30-34 storey apartment blocks.

## The Project

We started supplying the hotel part of the project at the beginning of the year with startabox, which was supplied until April/ May. The construction of the 2 apartment blocks began in June, on which they are taking startabox, but have also decided to utilize couplerbox where needed. This has resulted in a 24,000+ coupler order running from mid-June through to the end of August, with a further 24,000+ threaded bars to follow. Our production manager has this to say "we are making 1.2m long but site are cutting to their requirements, this is possible when its couplerbox as there is no steel in the case. Also, it can be made to almost any length. Like startabox, couplerbox is bespoke so all unique..."
